
data collection

Posted by confianzys - 2011/07/09 10:32

How will we analyze any data collected? What software will we use? What degree of accuracy is required.

In a data analyze no one is perfect software because little bit mistake is available in this type of data collection so my point of view manually is the best for you. otherwise you search in google lot's of data provider software available with free basis.
